

BASiX Automation Integrators

Fairchild Semiconductor

Fairchild Semiconductor International is the leading global supplier of high performance semiconductor products in the power, interface, analog, mixed signal, logic, optoelectronic, and configurable products markets.

Fairchild moved its corporate offices to its current location at 82 Running Hill Road in South Portland, Maine in December of 1999. This building is fully integrated with an Andover Controls building automation system controlling rooftop AC units, lighting and performing power sub metering. Fairchild chose to retain the services of BASiX Automation to maintain and upgrade the system.

In 2000, Fairchild renovated the entire 4th floor of the building for its upper management team. BASiX Automation worked with Fairchild to meet a very aggressive project schedule and had all the new VAV's up and online for move-in day.

BASiX has also reconfigured the programming to accommodate adding variable frequency drives to the air handling units, changing lighting schedules and upgrading software as well as training the maintenance staff of their facility management vendor.
